Design Explanation Report

Student Name: Wafa Adel Alzahrani
Student ID: 441500297
Course: Web Application Development (CS381)

1. Introduction

The objective of this assignment was to design and implement a fully responsive, semantic, and accessible personal academic portfolio website using only HTML5 and custom CSS3. The project consists of three separate pages: Home, Profile, and Contact.

2. Layout & Responsive Design

I implemented modern CSS layout techniques as required by the assignment:

• **CSS Grid:** Used in the Home page to create a flexible 2-column hero section.

• **Flexbox:** Applied to the Navigation bar for alignment and the Profile page to manage info cards.

• **Media Queries:** Used to ensure the layout transitions smoothly from mobile stacks to desktop rows.

3. Semantic Structure & Accessibility

• **Semantic Tags:** Used <header>, <nav>, <main>, <section>, and <footer> for better document structure.

• **Accessibility:** Focused on high color contrast and clear typography.

• **Privacy:** A custom CSS placeholder was used instead of a personal photo, named photo_441500297.jpg to meet the requirements.

4. Personalization

All content is personalized with my real academic data:

• **CV:** Highlights my skills in Java, C, and Python.

• **Interests:** Mindful reading, meditation, and creative writing.

• **Goals:** Building full-stack applications and mastering web tools.

Home Profile Contact

Personal Portfolio (CV)

A Computer Science student passionate about technology and innovation. I possess core skills in programming languages (such as Java, C, and Python) and web fundamentals (HTML/CSS). I am characterized by quick self-learning and effective teamwork, always seeking to enhance my coding skills through building practical projects and solving technical challenges.

Interests & Hobbies

- Mindful reading
- Meditation
- Creative writing

Learning Goals

By learning web development, I aim to understand how to build full-stack applications from scratch and transform creative ideas into tangible digital realities. I also strive to master modern technical tools that will enable me to compete in the digital job market and provide technical solutions that benefit society.
